**Answer to question from the interested supplier
in the competitive procedure with negotiations
"Consolidated supply of track sleepers with rail fastenings
and under sleeper pads for construction of Rail Baltica railway line",
identification number RBR 2021/13**

RB Rail AS presents following answer to the question received from the interested supplier until 7 September 2021:

Nr.	Question	Answer
1.	<p>RAILTRACKS – Most probably E-60 rails will be chosen for the complete track However, as you know, even though the proposed sleepers are designed by each concrete factory Differently, sometimes with such minor dimensional changes, that the rail will not fit the sleepers proposed.</p> <p>In order to offer the right sized type of concrete sleeper, would appreciate, that you disclose the type of rail RAIL BALTICA will choose to be used for the complete track.</p> <p>We from our side are able to produce ANY TYPE Of sleeper that would fit the rails without any technical obstacle It will also allow other participants to offer the right type of sleeper and avoid those participants from exclusion because Of non-suitability of their sleepers offered....</p> <p>Hope you understand our concern and await your confirmation to this point with the required info</p>	<p>Please be informed, that rail profile is already mentioned in 1st stage regulation (ANNEX NO 2: General description of subject matter – 2.2) and it is 60E2. Please note - at the moment weight of sleeper less than 300 kg is not under consideration, further details and complete technical specification will be available in the 2nd stage of the competition.</p>

	<p>- Sleeper weight – is 300 kgs a minimum or are sleepers with a weight >270 kgs also acceptable, provided the overall sizes Are conform to the sizes required and this with the guarantee of strength.</p>
